Version 9.2.1.42 (9.2A), May 15th, 2015

- o Changed internal version to 9201

Version 9.2.1.41 (9.2A), May 6th, 2015

o Added support for the following new releases:

- Adagio Payables 9.2A (2015.03.10)
- Adagio Receivables 9.2A (2015.04.10)
- Adagio Invoices 9.2A (2015.04.28)
- Adagio Inventory 9.2A (2015.05.15)

- o Updated supporting DLLs and dictionaries

- o The Active Users List has been enhanced to show the user ID, computer name, selected data information and Lanpak usage.
- o Added support for customer, item and order filters and styles.
- o Added support for the Adagio menu.
- o Adagio Styles, Colors and LanPak licensing will be made available to ePack on startup.
- o Fixed item inquiry.

Customer Maintenance and Inquiry

- o Fixed an issue with customer inquiry where an error appeared when opened.
- o Added an option to the Transactions tab to sort customer transactions by Date or by Type/Doc No. In previous versions, transactions were always sorted by Date when 'Current' or 'Historical' were selected and always by Type/Doc No. when 'Both' was selected. Also added an option to the screen to sort customer transactions 'Ascending' or 'Descending'. In previous versions this selection had to be made by right-clicking on the grid. And when 'Both' was selected, transactions were always sorted ascending.
- o Added 'Require PO?' option on the Invoicing tab in Edit Customer. Enable to require a purchase order number to be entered in the Reference field on the Header tab in Adagio OrderEntry when entering a new order, and in the PO Number field in Adagio Invoices on the Header tab when entering an invoice. Requires OrderEntry 8.1F (2014.09.30) or higher and Invoices 9.1A (2014.10.16) or higher. A default for new customers can be set on the Customer tab in the Company Profile.
- o Added 'Print BR Receipts' option to Invoicing tab in customer. Enable if you want to print a receipt in BankRec when payments for the customer are deposited. This enables the 'Print Receipt' option in the BankRec batch for receipts retrieved from Receivables, transactions entered in BankRec or generated in reconciliation. Requires BankRec 9.2A (2014.12.18) or higher.
- o Added 'Batch by entry' option in Payment Methods. Enable to create a separate deposit batch when receipts are retrieved in Adagio BankRec (including payments originated in Adagio OrderEntry and Invoices). This is very useful if you want all deposit entries using this Payment Method to appear in the Bank Reconciliation in BankRec as separate deposit entries, such as for payments received by EFT.
- o Added support for the A/R option 'Allow edit of posted desc or reference?'. Enable the option to allow the Description 1 and 2 fields and the Reference field for posted transactions to be edited on the Transaction Details screen, accessed from the Transactions tab in Edit Customer. Use this option to allow correction or updates to these fields after posting.
- o The Terms Description is displayed next to the Terms field in Edit and View Customer. This allows you to see the description in View Customer and to see it in Edit Customer without opening finder on the Terms field.
- o The open dialog can be sized horizontally to see the full data path

o The number of previously opened databases (saved by user) was increased from 25 to 100

Version 9.0.1.40, February 17th, 2015
